## Archiware P5 Synchronize now fully cloud enabled

**Archiware, manufacturer of the P5 software suite for data management and protection, have enhanced their data cloning product P5 Synchronize to work with all major cloud services.**

Keeping business critical data safe and immediately available at all times is a must. Archiware P5 Synchronize clones data from one storage location to another, making it easy to access in case of error or technical failure.

But it's not only safety aspects that administrators are faced with – collaborative workflows and dispersed international teams require data to be distributed automatically and fast to their shared storage.

In an increasing number of businesses, one such storage is the cloud – either in-house and private or hosted by one of the major services. To meet the demands for data protection in the cloud, Archiware has bundled P5 Synchronize with their own cloud connection tool WingFS to cover requirements for data mirroring or migration.

P5 Synchronize is able to clone or move data from any source to any target – local, network, remote or cloud. It can even mirror data between different cloud services, a feature which is unique in this market segment.

To demonstrate its possibilities and use cases, Archiware has launched a new, dedicated website for P5 Synchronize:

[www.p5-synchronize.com](http://www.p5-synchronize.com)

On the new website, customers can find information on all supported storage types and cloud services, as well as features and highlights of P5 Synchronize.

“P5 Synchronize is one of our most powerful products, so it was high time we gave it the attention it deserves,” says Josef Doods, CEO of Archiware. “With the new cloud support, it can help customers to make data available anywhere, anytime, cloning to and from all major cloud providers. And we are adding new services regularly.”

P5 Synchronize is a module from the Archiware P5 software suite. It can be combined with other modules for Backup and Archiving to secure data at every stage of their life cycle, from creation and production to long-term storage.

### **About Archiware:**

Headquartered in Munich, Germany, and privately held, Archiware is a manufacturer of data management software for backup, synchronization and archiving. Archiware P5 software is platform independent and aimed primarily at media and production companies. The product line includes

- P5 Synchronize - Replicate data to ensure high availability
- P5 Backup - Back up server data to disk and tape
- P5 Backup2Go - Back up desktop and laptop data to disk
- P5 Archive - Move or migrate data offline to disk and tape
