

SYNCHRONIZE - THE BETTER BACKUP.

Clone data for immediate availability with Archiware P5 Synchronize.

Archiware P5 Synchronize lets you replicate data to ensure high availability.

Servers, RAIDs or SANs are cloned and immediately accessible as failover. With P5's browser interface, synchronization is set up within minutes. Its also includes (X)San and FSEvents support for optimized workflows.

Maximum Data Availability – Without Restore

In a modern production environment, data availability is key. Serious enterprises need a serious data mover that connects a wide range of storage destinations in house or at remote locations — with ease, speed and reliability. Cloning data or a complete file system creates a failover solution for time critical setups.

Whether local disks, LAN storage or remote storage, P5 Synchronize is hardware and OS agnostic and offers a simple, flexible all-in-one approach. Simply think of P5 Synchronize as the Swiss army knife of data management.

Archiware P5 Synchronize is configured and monitored via the browser and offers straightforward functionality even for most advanced demands, making command line triggered sync procedures a thing of the past. P5 Synchronize automatically detects modified files and synchronizes them to a target destination.

Continuous Data Protection reduces the risk of data loss. For maximum availability, synchronized files are immediately available. No restore is required. In case of emergency, production can continue immediately using the cloned data.

IMMEDIATE ACCESS

INSTANT FAILOVER

VERSIONS & SNAPSHOTS

FSEVENTS

XSAN, METASAN, SAN

SOFTWARE HIGHLIGHTS

- Mirror between different locations
- Availability for time critical data
- No restore necessary
- Share between workgroups
- SAN cloning
- File Systems Events support
- Disk2Disk2Tape option

TECHNICAL FEATURES

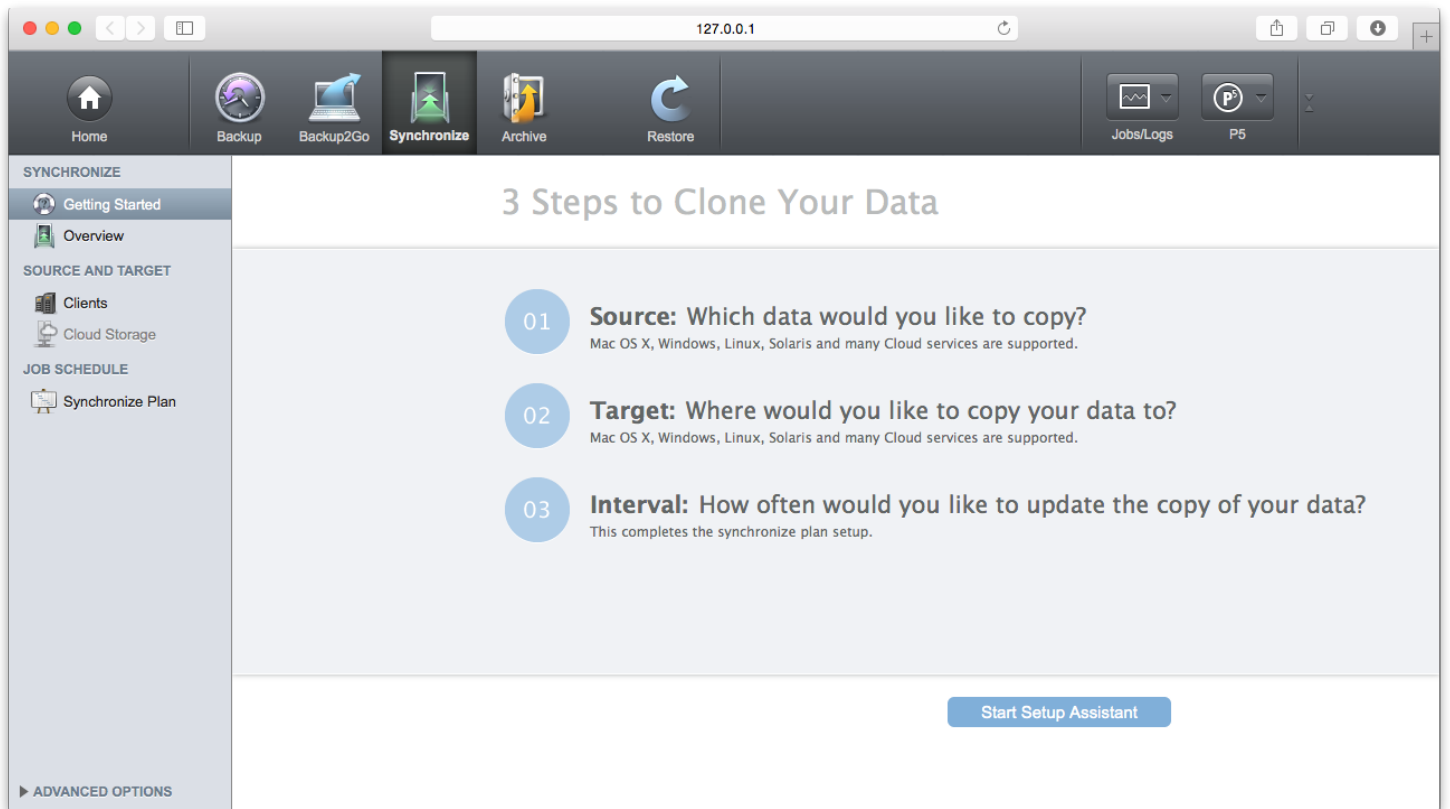

- Data Migration
- Data Duplication
- File versions
- Cycles
- Snapshots
- Interruptible
- File Filter/Policies
- Access to File System
- Data interchange between platforms

OS SERVER & CLIENT

- Mac OS X/macOS
- Windows
- Linux
- FreeBSD
- Solaris
- Synology

FILE SERVER

- ExtremeZ-IP
- Helios
- Xinet
- Netatalk

Maximum efficiency

P5 Synchronize can keep file versions and multiple snapshots, with these previous versions available in addition to the most up to date data clone. Snapshots of the whole file system can keep even more data available. In update mode, copies of only new and modified files are made. Required disk space and network traffic is reduced. By using hard links, your storage space is used most efficiently. P5's filters can easily be used to include or exclude files from synchronization; you can synchronize only selected file names, sizes, ages etc.

Data Migration

Moving files, even between heterogeneous systems, can be done within the shortest possible time frame. After the sync, files can be deleted automatically from the source.

Simple Distribution of Data

P5 Synchronize allows internal as well as external data transfers, therefore providing new means of communication and workflow organization. P5 Synchronize distributes data automatically to different locations, easily setting a clone of your data for distribution to partners, branches or agencies.

File System Snapshots

Since version 5.3, the Synchronize Module supports a powerful functionality of modern file systems such as ZFS or Btrfs, which is creating a snapshot of the status quo of data. These functionalities are special in that they use very little resources. Snapshots can be created instantly and the required storage space matches the amount of data that has changed. This functionality enables the user to keep and provide multiple cycles of synchronized data.

The P5 Synchronize license covers unlimited storage. No extra cost when storage grows.

OPERATING SYSTEM REQUIREMENTS

Mac OS X	Intel 10.6 - 10.12
Windows	Server2008R2, 2012R1/R2, 2016 Windows 7, 8, 8.1, 10 (64-Bit)
Linux	Kernel 2.6.4+ (x86 64-Bit) For FS-events with inotify, Kernel 2.6.13+ As Backup2Go Server: Btrfs 0.19+
Solaris	Sparc Solaris 2.8+, x86 Solaris 2.10+ Note: Language package Unicode UTF-8
FreeBSD	9.2, 9.3, 10.1 - 10.3 (64-Bit)
Synology	DSM operating system 5.2+ (Intel x86 64-Bit)

HARDWARE REQUIREMENTS

Memory	1 GB+
Hard Drive	1 GB for installation + variable (for backup/archive indexes)

BROWSER REQUIREMENTS

Safari	5.1+	Chrome	4+
Firefox	3.5+	Internet Explorer	10+
