QNAP, Overland-Tandberg and Archiware Join Forces for Data Protection

Munich, Germany/ Taipei, Taiwan, Nov. 16th, 2017 – Leading network storage provider, QNAP® Systems, Inc., storage solution manufacturer, Overland-Tandberg™ and data management expert, Archiware have joined forces to provide the optimal solution for data protection. The brand-new integration comprises QNAP’s Network Attached Storage (NAS), Overland-Tandberg’s RDX® removable disk system and Archiware’s P5 Software Suite.

QNAP’s cutting-edge NAS ranks amongst the most efficient and flexible. It improves data management with its ease-of-use, robust operation and large storage capacity. Business data is quickly stored and accessed, with additional integrated technologies and services included.

Overland-Tandberg’s RDX is the most popular removable disk system available. Contrary to cloud services, using an RDX for off-site storage provides the user with full control over the data. Independence of bandwidth and availability of any online service adds to the benefits.

Archiware’s P5 Software Suite offers platform agnostic data management software for archiving, backup and cloning of data. The browser-based software is now optimized to run on QNAP’s NAS and comprises four modules to secure and restore data: P5 Synchronize, P5 Backup, P5 Backup2Go and P5 Archive.

Using P5 Backup and P5 Archive, data can be stored offline at a different location for optimal medium- and long-term security. This is enabled by Overland-Tandberg’s RDX removable media, which is now available as an option for QNAP’s NAS models: TVS-882BRT3 or TVS-882BR. Using P5 Backup, a copy of the data is created and stored on the QNAP system, which can quickly be moved off-site for maximum protection. In P5 Archive, archived files can easily be referenced and restored using a file catalog, which includes thumbnails, media previews and searchable metadata.

Meiji Chang, General Manager of QNAP, said: "It would be our greatest pleasure to work with the globally renowned Overland-Tandberg and Archiware, and jointly deliver a strong and reliable total data security solution. With QNAP NAS, data can be efficiently ingested and stored on NAS and Overland-Tandberg’s RDX devices, both external and internal ones, via the Archiware P5 data backup and archiving utility. Multi-layer backup and disaster recovery plans can be easily deployed both on- and off-site, offering adequate mid- to long-term data keeping needs."

“The combination of powerful QNAP NAS with P5 for data management and RDX for removable media makes this integration particularly unique. The customer’s need for maximum data security and long-term archiving are supported in the simplest way possible,” said Archiware’s Business Development Manager, Dr. Marc Batschkus. “More and more customers are discovering how valuable their data is and this combined solution solves their issues.”

A live demonstration of the QNAP NAS, Overland-Tandberg’s RDX and Archiware’s P5 integration will be presented at Inter BEE 2017 at QNAP’s Booth 4303.
About Archiware:
Headquartered in Munich, Germany, Archiware GmbH is a privately held company with over 20 years of experience in data management software for backup, synchronization and archiving. Archiware’s software is primarily aimed at the SMB and Media & Entertainment industry. The product line includes:
- P5 Synchronize – Replicate data to ensure high availability
- P5 Backup – Back up server data to disk, tape and cloud
- P5 Backup2Go – Back up desktop and laptop data to disk
- P5 Archive – Move or migrate data offline to disk, tape and cloud
- Pure – Essential VMware Backup
