ARCHIWARE

Archiware Streamlines Data Lifecycle Management in P5 Version 7.4.

Archiware, a leading manufacturer of data management software specializing in synchronization, backup, and archiving, releases version 7.4 of its P5 data management platform. With a special focus on operations and Data Lifecycle Management (DLM), the new version introduces powerful new features to optimize data integrity, redundancy, and efficiency.

Munich, May 13th, 2025 – P5 Version 7.4 delivers powerful advancements emphasizing flexibility, redundancy, and integrity to meet the evolving demands. Among the highlights of the new version, is the redesigned, customizable dashboard, which provides users with an intuitive overview of system status and job activity. Graphs can be added to visualize backup, archive, and cloning operations over selectable periods. Additionally, storage pools and LTO writing speed can be displayed helping administrators to easily check on all vital operations.

P5 Archive DLM, formerly P5 Data Mover, now includes volume verification. This new feature verifies the integrity of archived data across tape, cloud, or disk storage by comparing file checksums stored. Any unreadable files are identified and reported, strengthening data security for long-term archiving.

New flexibility comes with the ability to archive simultaneously to up to three storage pools of different media types. Each file is saved to multiple targets, providing diverse redundancy options while maintaining a streamlined archive index. Additionally, users can now clone existing archive volumes after the archive has been completed. This allows the creation of block-identical copies for disaster recovery, even when redundancy was not initially planned.

Preview generation has been optimized with the introduction of Preview Clients. P5 clients can now share preview creation tasks, ensuring faster processing and improved performance across mixed hardware environments to distribute system load for more efficiency and speed.

Enhancements to S3 Object Archive improve control over staging area management, preventing local storage from overfilling during large or continuous archive jobs. This ensures greater reliability and efficiency when archiving directly to Amazon S3-compatible storage.

About Archiware

Thousands of media companies worldwide use Archiware P5 to protect their production and assets. The product line includes:
- **P5 Synchronize**: for replication of time-critical data, to ensure high availability.
- **P5 Backup:** to back up server data to disk, tape, and cloud.
- **P5 Archive:** with MAM-like features, migrating data offline to tape and cloud.
- **P5 Archive DLM:** an extension for the P5 Archive module for automated data lifecycle management of archived data between tape, disk and cloud.

All modules can be combined to create multiple-step security concepts to achieve maximum data protection. Archiware P5 secures data to disk, tape, and cloud and has integrations with numerous MAM/DAM/PAM and storage partners. Headquartered in Munich, Germany, Archiware GmbH is a privately held company with over 24 years of experience in data management software and more than 18,000 licenses sold worldwide. Protect your files and find your solution at **www.archiware.com.**
