ARCHIWARE

Archiware Releases P5 Version 8.0 with Cloud Synchronize Support

Archiware GmbH, expert in data management software, announces the release of version 8.0 of its P5 Data Management Platform. The update introduces a range of powerful new features designed to increase operational control and efficiency, including:

- **P5 Synchronize**: Bidirectional cloud sync plans with AWS, Azure, Google Cloud, Wasabi, and other S3-compatible storage
- **Project Restore**: Restore archived data using project files (EDL, OTIO, FCPXML, and ALE)
- **P5 Archive DLM**: Project-based storage monitoring using customizable queries
- **P5 Archive**: LTO hardware encryption support for secure archival
- **P5 Archive**: Selective data deletion, volume reuse & secure erase
- **P5 Archive:** Preview generation configurable to run on multiple clients simultaneously
- **Dashboard option**: Track storage usage per project and visualize long-term trends

Munich, February 2, 2026 – The latest update to Archiware P5 delivers major advancements across cloud integration, project restore, storage monitoring, security, and user interface design. With P5 Synchronize, users can now schedule data replication and migration between storage hosts and any S3-compatible object storage. On-prem production storage can easily be replicated as a remote backup of live data. Additionally, asset distribution for collaborative teams is streamlined and data sovereignty strengthened by restoring cloud-hosted content to full local control.

In P5 Archive, the new Project Restore feature streamlines media recovery by importing project files and automatically restoring all referenced media. The intelligent parsing facilitates media restore even when file paths have changed. The new version also supports bulk processing and selective version recovery, as well as controlled deletion of long-term archived data. Performance is further boosted with true parallel preview generation, accelerating ingest workflows by processing previews simultaneously across all available hosts. LTO hardware encryption adds robust, drive-level AES-256 protection for archived data, providing compliance at maximum performance.

The P5 Archive DLM add-on introduces advanced project-based storage monitoring with customizable queries. Users can track archive growth, analyze usage trends, and optimize storage allocation. The updated dashboard further improves visualization of storage usage per project and long-term trends over time.

Archiware P5 version 8.0 is now available as an upgrade or as a free, fully featured 30-day trial on the Archiware website: **www.archiware.com/download-p5**

ARCHIWARE

About Archiware

Thousands of media companies worldwide use Archiware P5 to protect their production and assets. The product line includes:

- **P5 Synchronize**: for replication of time-critical data, to ensure high availability.
- **P5 Backup:** to back up server data to disk, tape, and cloud.
- **P5 Archive:** with MAM-like features, migrating data offline to tape and cloud.
- **P5 Archive DLM:** an extension for the P5 Archive module for automated data lifecycle management of archived data between tape, disk and cloud.

All modules can be combined to create multiple-step security concepts to achieve maximum data protection. Archiware P5 secures data to disk, tape, and cloud and has integrations with numerous MAM/DAM/PAM and storage partners. Headquartered in Munich, Germany, Archiware GmbH is a privately held company with over 24 years of experience in data management software and more than 20,000 licenses sold worldwide.
