

# Maximum Media Protection with Scale Logic and Archiware

Time pressure puts data in media production at high risk. User errors are the most common threat. Storage fills up faster than ever due to large production formats. More accessible and powerful than ever, LTO is the storage solution that banks and insurance companies as well as all internet giants use.

Archiving is the best method to build a central repository of completed productions and save space on high performance storage. Archiving to LTO tape offers the best long-term protection and lowest cost per TB of any medium. Browse, search and restore anything anytime.

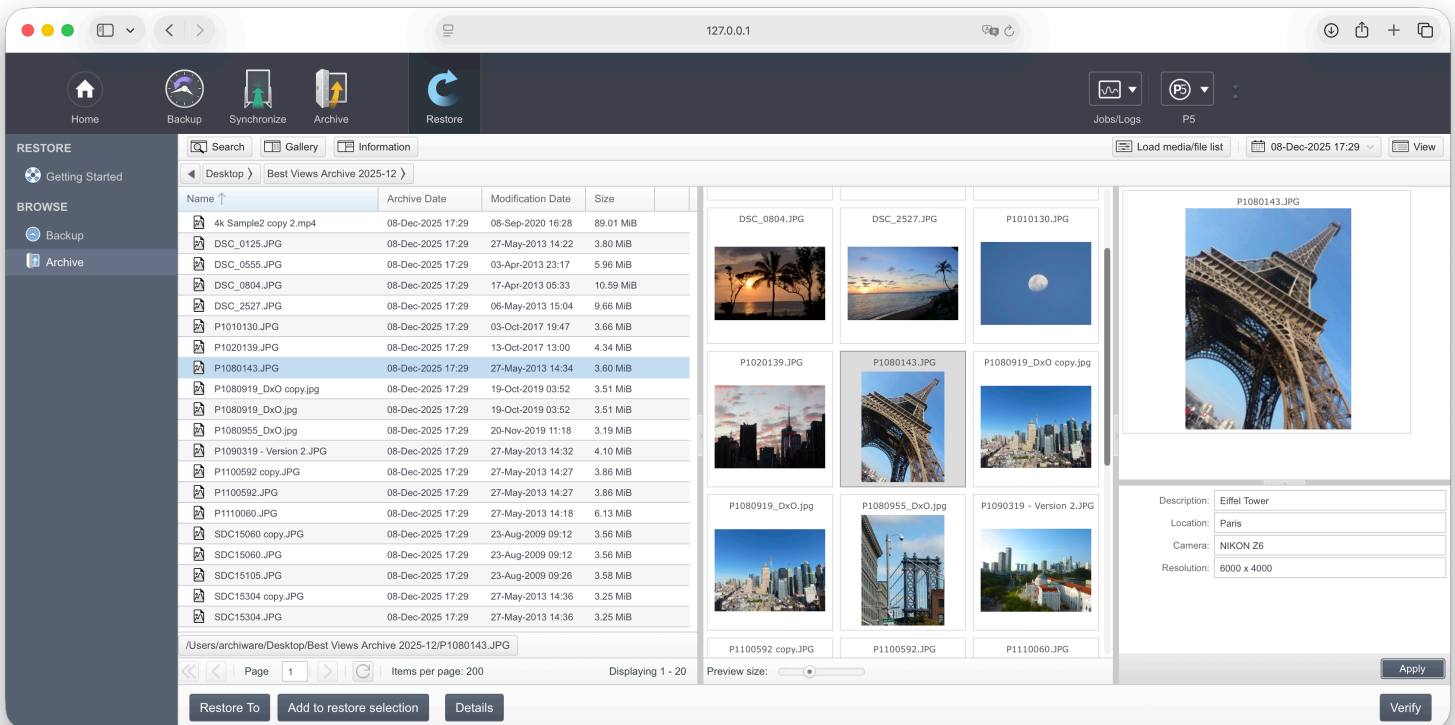

Scale Logic storage solutions like the NX2 and IAP (Integrated Application Platform) Servers combined with P5 Archive and P5 Backup offer extremely attractive solutions for storage and data protection.

Archiware P5 Archive and P5 Backup are compatible with all of Scale Logic's servers and appliances. P5 installs seamlessly on top of appliances, eliminating the need for additional server or networking hardware, saving customers money while simplifying their workflow and protecting their valuable assets.

Combined with P5 Archive, the result is an easy, reliable, robust and scalable solution. Add P5 Backup to save production data daily. Parallelization of multiple drives provides maximum throughput. Maximum data security is achieved by tape cloning and storing tapes off-site.

**Advantages of the Scale Logic solution:**

- ✓ No per seat client cost
- ✓ Browse and search media with previews/proxies
- ✓ Easy user restore
- ✓ Customizable metadata fields
- ✓ Simple connectivity with FC, Gigabit or iSCSI
- ✓ Tailored bandwidth per user
- ✓ Real-time latency enhancements
- ✓ Solid and experienced tech support
