

IDrive e2 & Archiware P5

Media assets and video content are created at an ever-increasing rate. This can result in operational as well as financial challenges. Therefore, reliable, compliant and affordable cloud storage is needed, enabling many possible workflows and strategies for data protection and distribution.

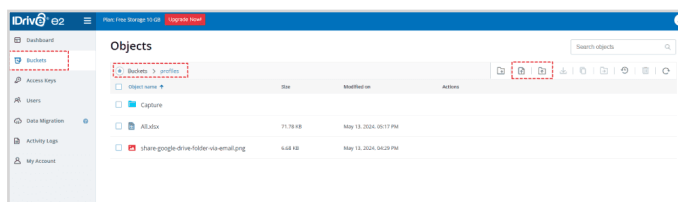

IDrive e2 offers a highly scalable, fast, reliable hot S3-compatible object storage solution. Petabytes of data can be stored on pay-per-use pricing, making it an ideal low-cost cloud storage infrastructure for developers and businesses alike.

Archiware P5 is a platform-agnostic software for archiving, backup and cloning of data. The browser-based software comprises four modules, which use different methods to secure and restore data. Archiware P5's professional backup and archive solutions are compatible with numerous cloud services.

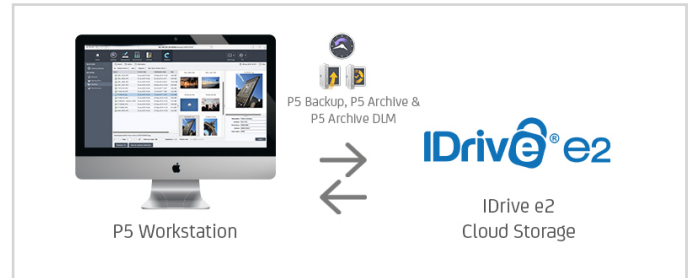

Migrating completed projects and productions away from costly production storage saves cost and constant storage expansion. The Archive can serve as a "Single Source of Truth" where all finished productions can be found.

P5 Archive offers a powerful MAM-like Archive catalog including thumbnails, proxy clips, customizable metadata fields and combined search. This way, existing assets are easy to find and can be referenced and reused quickly.

The P5 Archive DLM offers maximum flexibility for the Archive since all archived files can migrate, be replicated or tiered between all storage categories, disk, tape and cloud storage. Building a media archive using P5 Archive offers maximum flexibility because the P5 Archive DLM add-on can migrate, replicate, or tier archived content that was ingested using P5 Archive.

Advantages of the IDrive e2 Solution:

- ✓ No fees on egress
- ✓ SOC 2, GDPR, HIPAA compliance
- ✓ 15 Edge locations across the US, Canada, Europe and Asia - for faster access and low latency
- ✓ Affordable yearly plans with reserved storage
- ✓ Monthly plans starting at \$4/TB/Month
- ✓ Free cloud migration tool
- ✓ Object lock with immutability
- ✓ Browser-based access, runs on NAS devices (QNAP, Synology, etc)
